

Easily Order Molecular Tests

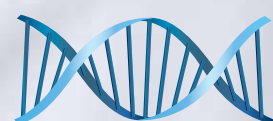

Instant Access 24/7 from any Location

Enables Rapid Test Ordering

Highly Secure and Fully Auditable

Orders Traceable to Clinician and Lab

Easily Order RAS, BRAF ALK,  
C-KIT and EGFR and more.

MolPath

*Enhancing the effectiveness and efficiency of molecular test ordering processes.*

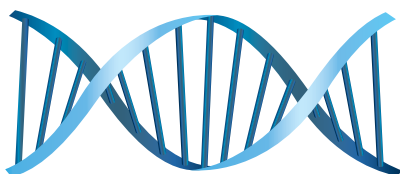

# MolPath

## APP OVERVIEW

Efficient and effective patient treatment increasingly hinges on speed and accuracy of molecular testing. Major drivers of healthcare costs are time and resources spent in trying to achieve appropriately directed chemotherapy. Furthermore it is well known that the key to effective treatment is early diagnosis. As mobile technology becomes more sophisticated, mobile apps have huge potential to deliver simple, effective, inexpensive, and personalized test ordering to healthcare professionals. Tablets and smartphones are readily available to clinicians, thus presenting an ideal opportunity for immediately providing instant access to the latest patient data and the ability to order crucial molecular tests. The EU believes such apps could lead to €99bn of savings in Europe alone, helping cut healthcare costs by enabling early treatment and by allowing health professionals to save up to 30% of their time on accessing and analyzing data.

Molecular tests such as RAS, BRAF, ALK, C-KIT and EGFR are the latest in frontline clinical tools for guiding diagnosis, prognosis and treatment. NSilico is bringing a new mobile app known as MolPath to the market. This mobile app allows clinicians to order sophisticated molecular tests from their smart phone. Designed by leading consultant pathologist Dr Bill Bennett, the MolPath app provides clinicians with the ability to order tests offsite, at the clinic and MDT straight from their smart phone. It provides a defined ordering process, with electronic orders sent automatically to the pathology department and a record of orders maintained in the app and the pathology laboratory, resulting in no more "lost" orders!

Patient details can be scanned or entered manually and a suite of molecular tests can be quickly ordered. MolPath is available from the Google App store, iTunes and is available for all mobile devices here: [www.nsilico.com](http://www.nsilico.com)

## MolPath

### BENEFITS

- Easily Order Molecular Tests
- Instant Access 24/7 from any Location
- Enables Rapid Test Ordering
- Highly Secure and Fully Auditable
- Orders Traceable to Clinician and Lab

### FEATURES

- Mobile App
- Scan Patient Codes
- Cloud Based Solution
- HIPAA Compliant
- Developed in Partnership with Leading Pathologists

Phone: +353 87 1348353  
E-mail: [info@nsilico.com](mailto:info@nsilico.com)
